

NEW OBLIGATIONS FOR INSTALLERS

From 1 December 2019 connecting distributed energy resources to the network - including rooftop solar - will require installers and electrical contractors to provide information for the Australian Energy Market Operator's (AEMO) Distributed Energy Resource Register (DERR).

Installers must provide details about the equipment installed, such as manufacturer/model/serial numbers.

Installers will also need to confirm protection and control settings.

Networks are responsible for submitting information to AEMO – via the normal submission process per network.

Once the DERR is successfully lodged with AEMO, the network will provide the installer with a DERR installation certificate/receipt.
